

Control Systems, Field Control and Soil Sensing

**Buy 3 Sensors
Get 1 FREE**

Toro® Turf Guard Wireless Soil Monitoring System helps you improve your turf, soil and water efficiency. The Turf Guard system is a revolutionary technology that lets you know what's going on beneath the surface of your course, so you can make timely, more-informed adjustments. Turf Guard uses small, dual-layer sensors buried under a putting green, fairway or tee box. Installation is quick and easy without any wires or trenches, and golfers never know the sensors are there. Once in the ground, each sensor accurately measures moisture, temperature and salinity levels of your soil at two depths, in real time. That data is then collected and compiled into easy to view and understand tables, graphs and dashboards. This information can then be accessed from any Internet-connected computer by connecting to the system's Web-based interface. You can even access your sensor information from a Web-enabled cell phone, Ipad or other mobile device.

Ask About our Turf Guard Demo Program

Turf Guard Works with any Irrigation System No Software or Central Control Required

**24 or 36 Month 0% Interest Financing Available on
Turf Guard, Control System and
Narrow Band Upgrades**

Attention Toro Site-Pro Users

Sharpen Your Instincts
LYNX

For a Limited time Existing Toro Central Control Users have an opportunity to Upgrade to Toro's latest Lynx control system at **some very special prices**. The program includes both NSN and Non-NSN subscribers. Central users with VP, Osmac, Decoder or NW8000 systems can usually upgrade without making changes to field hardware. **Plus qualify for a \$999 Turf Guard Starter Kit with a Lynx Upgrade**

LTC+ users require an upgrade of field satellites to VP. Upgrade kits are available. Upgrades are eligible for 24 or 36 month 0% financing.

Do you have a radio based control system such as OSMAC or EOsmac, or competitive radio system? Grassland and Toro can help you meet the new **FCC Narrow Band requirements**.

Integrated Decoder Head

In addition to our standard GDC decoders, Toro now offers most valve-in-head sprinkler models with an **Integrated Decoder**. This configuration reduces the quantity of overall system splices, yet retains the ability to separately service the decoder and solenoid.

Sprinkler Head Specials

Owners of **Competitive 1.5" Golf Sprinklers** can now upgrade their heads with Toro conversion assemblies designed to fit their existing heads. What's more, these Toro Conversions are being offered at special introductory prices.
