# Four Season's Turf Reporter

## Toro Introduces New TriFlex Greensmasters by Kirk Pogge

Toro's all-new Greensmaster® TriFlex™ and TriFlex™ Hybrid models are the first riding greens mowers to cut with the precision of a walker. These models were completely redesigned from the ground up to deliver improved cutting performance and course playability, setting a new standard for cut quality in riding greens mowers.

One key to the exceptional quality of cut is the suspension system. Proven Flex suspension allows the cutting units to float over the contours of the putting surface, keeping the cutting units parallel to the ground to maintain consistency of cut and to prevent scrubbing. The double arm flex suspension system prevents gouging or scalping over modest or severe undulations. Plus, the exclusive lift-in-turn feature delivers a consistently level cut during turns, which reduces triplex ring on the clean-up pass.

In addition, the TriFlex Hybrid models feature an all-electric reel drive system that virtually eliminates hydraulic leaks and delivers ample horsepower to handle a broad range of cutting applications. This system also has an exclusive stored energy feature that eliminates clip marks at reel startup and delivers braking power for improved safety when reels are disengaged.

To minimize tire tracks, weight is equally distributed over all three wheels, and redesigned balloon-style tires eliminate sidewall loading for evenly distributed pressure over the entire footprint. Patented dual precision adjustment (DPA) cutting units also maintain adjustment longer. And the redesigned clippings capture system retains nearly all grass clippings for a cleaner cut and to promote healthier turf.

This new generation of Toro Greensmaster mowers combines major new innovations with the proven benefits of previous models, explains Helmut Ullrich, Toro's senior marketing manager for greens mowers.

It's a giant leap forward, both in performance and value for our customers. For maximum versatility, all TriFlex and TriFlex Hybrid units

are equipped to do more than greens mowing. In fact, quick-change cutting units make it possible to cut greens or fairways one minute and easily convert to spiking, thatching or verticutting a few minutes later with no tools required.

*cont. page 2*

Above: Golf course personnel check over the new Toro TriFlex during Toro's Greensmaster Tour Event at Capital Hills Golf Course in Albany on May 5th.

Below: Toro Engineers reviewed product features and demonstrated the new TriFlex for the nearly 60 customers in attendance. Customers also had a chance to try the equipment. See all the pictures on Grassland's Facebook Page

## New Greens Mower, Cont. from page 1

The 8, 11 and 14-blade cutting units allow operators to choose the right reel and matching clip for the job, from a 1/16th inch to 1 inch height-of-cut. Faster transport speeds, more powerful gas and diesel engines, and improved ground clearance also save time while expanding the versatility of these machines.

Regardless of the application, the adjustable tilt steering, easy-to-use controls and optional deluxe seat allow operators to work comfortably and productively all day. And the tricycle design ensures that the rear wheel will always turn within the radius of the front wheels, minimizing the chance of dropping a rear wheel in a bunker, getting stuck or damaging the bunker lip or turf. In addition, golf course residents will appreciate the new low-noise muffler.

Improved serviceability is another major advantage of the new TriFlex models. An exclusive lift-gate footrest provides easy access to the center cutting unit, so there's no need to put the traction unit on a lift for routine maintenance on the reels. The quick-change cutting units make reel grinding, routine adjustments or occasional repairs easier, safer and faster as well.

TriFlex units are packed with many other convenient service features, including no grease points, visible fluid level windows on the fuel tank and hydraulic fluid reservoir, jack points on all three wheels, and advanced computer diagnostics.

The Greensmaster TriFlex Hybrid riding mowers are among Toro's first products to display the EnergySmart™ label. The EnergySmart label isn't just about environmental responsibility. It's about helping customers sustain their business, notes Ullrich. These products address both the customer's environmental and financial needs with a combination of features that save energy, enhance productivity, extend a product's versatility, and enhance turf health.

Scott Gallop, Superintendent at Capital Hills receives a plaque from Dave Dynowski, Toro for his help in hosting the Greensmaster Tour Event in Albany

Above: Dave Dynowski, Toro, explains features and operation of the new Lithium-Ion Powered Walk Greens Mower, while Geoff Leather, Saratoga Golf & Polo and others look on. Below: Peter Cure, Orchard Creek Golf Club, trying out the New Toro eFlex.

## New Lithium-Ion Battery Powered Greensmower Previewed

Toro and Grassland gave customers a review of its all-new Greensmaster® Flex™ and eFlex™ walk greens mowers at Master the Greens Event at Capital Hills Golf Course. The new greensmowers are scheduled to be released this fall.

The new Flex and eFlex models will bring several important innovations in performance and productivity to the walk greens mower market, including:

The industry's first-ever lithium-ion-powered, all-electric mower the eFlex. This all-electric mower delivers game-changing functionality. Simply mow, charge and repeat. A single charge is sufficient to mow up to nine greens and the battery can achieve a 96% charge in a mere 4 hours.

Improved operator controls including an automated EZ-Turn™ feature, will provide operators with better control and comfort at all times. The EZ-Turn user selectable feature, standard on all eFlex models automatically slows the mower down at the end of a pass and speeds it up again on the return pass, resulting in better control, less turf damage, and a better overall cut.

The variable Clip Feature allows for 6 easily selectable clip options per reel type (8, 11, or 14 blade reel options), resulting in 18 distinct clip rates in all.

The new Greensmaster Flex and eFlex models will be available in both 18- and 21-inch cutting widths, and every model utilizes the Toro-patented flex suspension and DPA cutting units. To learn more details and to review several additional enhancements on these all new walk greens mowers, visit [www.toro.com/golf/newgreensmasters](http://www.toro.com/golf/newgreensmasters)

## Toro DT Block Sprinklers

The B Series Golf sprinkler family provides the great features and performance of the 835S, DT34 and DT35 Series sprinklers in a more economical body package specifically designed for block systems. With its rugged golf body design, small exposed surface diameter, flanged

body for stability and check valve that prevents low head drainage, these sprinklers are perfect for every golf application.

### Features:

- 835B with tru-jectory adjustment from 7° to 30° and DT models with dual settings of 25° or 15°.
- The industry's largest selection of precision nozzles from 25' to 90' radius applications.
- One sprinkler for every location on the course-these unique sprinklers can be a full circle.
- Small exposed diameter minimizes the appearance of the sprinkler.
- Flanged cap installs below grade to stabilize the body position and maintain optimum nozzle.

Grassland is pleased to announce that Toro is once again offering

**24 or 36 Month - 0% Interest \***

Financing on all control system upgrades. Eligible products include: central computers, satellite controllers and LTC+ to VP Satellite Upgrades.

Now is a great time to upgrade your control system.

*\* Documentation fee of \$250 applies.  
Down Payment may be required.*

## Pending FCC Narrowband Deadline

by Dave Knox

The FCC has mandated that all business VHF and UHF radio systems that have been licensed as "wide-band" be converted to "narrow-band". This mandate requires ALL equipment utilizing wide-band services be upgraded to narrow-band by December 31, 2012 in order to continue legal use of your license. In addition, your FCC license must be modified to reflect this change in technology.

We recommend the following process to help with this transition:

- Tell us which license you would like to update to narrow-band. We will apply for an amendment to your current license.
- We will put together a quote for all satellite, central computer components to make the transition.
- Reprogram any hand-held radios, and repeaters if applicable.

Until your ENTIRE radio system is replaced and/or re-programmed to operate in the narrow-band bandwidth, you are still operating in wide-band.

Remember December 31, 2012 is not that far away!

Scott Dunbar, Superintendent at Diamond Hawk Golf Course in Buffalo; poses with his new ToroLynx® Central Control System. Diamond Hawk has a Toro 2-wire decoder system originally installed with Toro Site-Pro. Scott recently upgraded from Site-Pro to Lynx without having to make any changes in his field hardware.

## Other News

### New York State Mower Contract Extended to November 30, 2012

**Grassland Equipment has been awarded LOT # I Contract # PC64358SB, Mowing Equipment, Commercial and Golf Course Riding Type (Statewide) Contract Period: March 13, 2009 - November 30, 2012 Group: 37000, Award: 21459-PF.** This LOT includes the following Toro Products: Zero Turning Mowers, Greens Reel Mowers, Fairway Reel Mowers, Rough Gang Reel Mowers, Rough Gang Rotary Mowers, Trim Mowers (Rotary), and Trim Mowers (Reel). For more information go to [www.grasslandcorp.com](http://www.grasslandcorp.com) and click on the State Contract Link, or contact your Grassland Representative.

### **Gary Hughes, SCPS Receives Green Blazer Award**

The Toro Company announced its 2010 distributor sales award recipients at the annual Toro awards presentation held in Orlando, Florida. Toro's awards recognize distributor personnel for customer-focused sales programs in the turf equipment market.

Gary Hughes, SCPS, Western New York Territory Sales Representative for Grassland Equipment & Irrigation, received the prestigious Green Blazer Award for his accomplishments in equipment sales. This award is given to a sales representative who has a minimum of three years experience selling Toro products. It recognizes individuals who are contributing to the industry and bringing enhanced knowledge to their customers. "Gary is a great resource for his customers," said Jim Heinze, CSE, Director of Commercial Sales and Training for Toro's commercial business, "He will do whatever it takes to address and solve a problem; his customers trust him and see him as very dependable."

Jim Heinze and Dave Dynowski, Toro, Gary Hughes, Grassland Equipment and Jack Randell, Toro, upon presentation of Gary's Green Blazer

### **Email and Fax Order Confirmations and Updates Now Available**

Customers can now receive automatic Email or Fax Notifications for parts and other orders placed with Grassland Equipment. Customers that sign-up for the free service will receive an automatic Order Acknowledgement complete with prices when their parts order is created, and a shipping notification including UPS tracking number, when the order is shipped. Service customers can sign-up to receive updates on the progress of service work orders via Email or Fax as well, including notification when the work order is created, when our technicians begin work, and when the work order is complete. You can also request that your Grassland Invoices and Statements be delivered via Email or Fax. To sign up, visit our website and click on the Customer Notification Sign-Up Link on our Home page, or ask your sales rep to sign you up.

## How to Save 3% on Every Toro Parts Order

Grassland is now offering our commercial customers an even greater incentive to use Toro's innovative myTurf Fleet Management system. Effective immediately, and until 4/1/2012, all orders placed via myTurf will be eligible for a 3% discount. myTurf is a state-of-the-art, comprehensive and easy to use Fleet Management system all on-line available 24x7.

### TORO myTurf Fleet - Is Free, Simplified Equipment Management

- Track your entire fleet on-line. Grassland can help provide you with detailed purchase records to help with this effort.
- Instant access to the latest Toro manuals and information. Order parts on-line anytime, anywhere using interactive parts diagrams that allow you to order parts directly from Grassland Equipment. No software to download.

### Preventative Maintenance

Our parts and service technicians are factory trained and certified. Our dealership commits resources of time and money on an ongoing basis for training to assure that our frontline personnel are ready to provide our customers with the best service possible. We continue to offer our Winter Service Program from November through April. Our customers that utilize this program find that this service minimizes down time during the growing and cutting season. They find that the investment in productivity and efficiency is the answer to keeping their equipment ready when it's needed the most. We at Grassland continue to guarantee to our customers that utilize our winter maintenance program that if for any reason their equipment fails them during the cutting season we will have them back up and running within 4 working days or will provide a replacement piece of equipment at no charge until theirs is back on the job.

### Jack Wands, CSM Earns Certified Service Manager Status

Jack Wands, Commercial Service Manager for Grassland Equipment, recently completed the certification process required to receive the Certified Service Manager Award from the National Association of Service Managers. The Certified Service Manager® (CSM) credential was introduced in 2009 to address the specific education and certification requirements for service managers at dealer and distributor locations that provide numerous and complex service-related capabilities directly to customers and sales personnel.

# Buy 6 Filters and Get 2 FREE

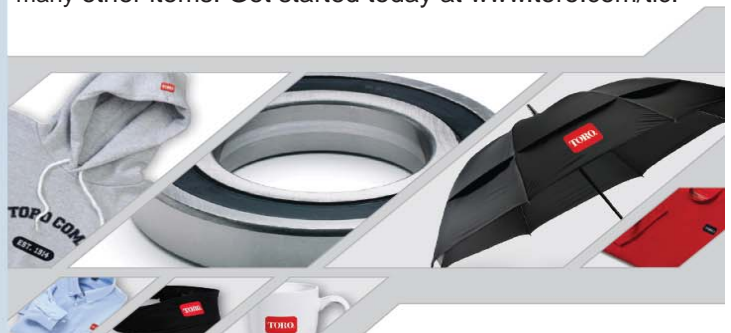

Now through June 30, 2011, you will receive two free filters when you purchase six!  
It doesn't matter which Toro® filters you buy—mix and match them as you like!

## Double TLC Points on all MVP Kits!

Receive 1,000 TLC Points for every MVP Kit you purchase between now and June 30, 2011! Our MVP Kits include all the quality parts you need to get the job done — at a savings over buying the parts separately.

Double TLC Points and discounted pricing make one sweet deal!

Not enrolled in TLC? You're missing out! TLC is a completely free program where you earn points for qualified purchases. Points can be redeemed for hats, shirts, parts credit and many other items. Get started today at [www.toro.com/tlc](http://www.toro.com/tlc).

## Toro Launches First-Of-Its-Kind R Series Golf Sprinkler Conversions

Toro has released new R Series Conversion Assemblies for the golf market. For the very first time, these new sprinkler internals enable golf courses with existing competitive 900 Series and 1100 Series sprinklers to upgrade to Toro's industry leading innovative sprinkler technology – including the patented TruJectory™ height of spray adjustment, full and part circle in the same sprinkler, and an extra one-and-a-half inch pop-up height.

Toro's new conversion assemblies enable golf courses to easily and cost-effectively upgrade their irrigation system by purchasing only the Toro sprinkler internals, keeping intact the existing competitive body and any previously-installed piping.

With Toro's new conversion assemblies, current competitive sprinkler users can now realize the benefits that Toro's sprinklers provide while dramatically increasing the efficiency and flexibility of their current irrigation system.

Three different models of R Series Conversion Assemblies are available, including the 855RB, DT55RB and DT54RB. Features include an exclusive TruJectory feature that allows for main nozzle angle adjustment and provides improved obstacle avoidance and performance in windy conditions, and for radius adjustment, which provides more precise water application.

Toro's sprinkler internals also provide part- and full-circle drive assembly in a single unit, which allows for part-circle arc adjustments from 40 degrees to 330 degrees, and a true uni-directional full circle performance. In addition, the sprinklers feature an additional one-and-a-half inch pop-up height, and provide improved nozzle performance and a ratcheting riser.

Other benefits of these conversions include a radius reduction screw, Dura Seal riser seal to minimize wasteful water flush when the sprinkler pops up, yardage marker, effluent indicator, back-nozzle and main-less nozzle capable, a constant velocity drive that provides reliable rotation speed, and the industry's largest and most flexible nozzle selection. Plus, each conversion assembly includes a hold-up tool, four complete nozzle sets to cover a wide range of flow and radius requirements, and a fully serviceable riser assembly.

Toro has also introduced two new solenoid adapters, the Toro Spike Guard™ and the Toro DC latching solenoid adapter that can be used to upgrade all competitive 700 Series, 900 Series and 1100 Series sprinklers. The Spike Guard solenoid adapter provides users three times the surge protection of their existing solenoid at 20,000 volts and draws half the amperage, allowing more stations to be run simultaneously—if the hydraulic system allows.

The DC latching solenoid adapter enables existing competitive sprinklers to be upgraded and controlled by the Toro GDC system.

***These Conversions are being offered at special promo prices, PLUS when you purchase 5 R-Series Conversions you get one Free, up to 5 free units per customer***

**TORO**

### Integrated Decoder Sprinkler

In addition to their standard GDC decoders, Toro now offers an **Integrated Decoder** with most valve-in-head sprinkler models. This configuration reduces the quantity of overall system splices, yet maintains the ability to service the decoder and the solenoid separately.

Grassland's Irrigation Catalog includes information on all your irrigation needs. You can download the catalog from our website, or contact us and we will send you a copy.

We also carry drainage supplies

## STX-26 Stump Grinder - 26hp

Some dedicated stump grinders are over-complicated. Not the Toro STX. Its patented Toro® Dingo® TX-style control system has two simple levers that are simple to learn, master and use. Combine these easy-to-use controls with tracks and transport speeds exceeding 4 mph, and you get maximum productivity. Wet, hilly terrain won't stop you from accessing tough jobs year-round with an STX stump grinder. The tracks travel easily over muddy areas, with the low center of gravity adds side hill stability. In addition, the hydraulically driven head means no chance of expensive belts breaking or slipping no adjusting tension - guaranteeing optimal performance time after time.

*Compact Utility Loaders, Stump Grinders, Chippers, Trenchers, Log Splitters and More*

# New State Pesticide Regulations

Chapter 85 added section 409-k to the New York State Education Law (SEL) and 390-g to the Social Services Law (SSL). Those sections impose a prohibition on the application of most pesticides to playgrounds, turf and athletic or playing fields at Schools and Day Care Center's in the State of New York.

Since herbicides will not be allowed on School athletic fields, your only defense against weed infestations is over-seeding. Be prepared for this new regulation with a First Products Aeravator three point mounted or tow behind aerator and seed box. Grassland offers multiple sizes (40" - 60" - 80") in tow behind units with engines as well as three-point tractor mounted units with or without seed boxes.

First Products Aeravators deliver vibrating solid tine turf aeration with minimal turf disruption due to its solid tines and swing hitch design which reduces turf tearing in turns. You can use the First Products Aeravator virtually anytime of the growing season. The Aeravator with optional seed box can deliver over-seeding rates as low as 1 pound per thousand square feet and as much as 5 pounds per thousand which can be used for primary (bare ground) seeding.

# TRUE-SURFACE®

*...makes true greens!*

The True-Surface® Greens Care Collection is designed to make your greens care program easier on you and your budget. The True-Surface® vacuum effect will clean-up your greens with

no additional labor, saving you time and money. Your greens will be ready to play as soon as you drive off!

**FAST & EASY!** Each insert can be switched out by releasing 2 retractable spring plungers - no tools needed. The hydraulic motor always remains attached to the frame. Inserts can be retro-fitted on the course, no tools or technicians are needed!

The collection is designed to fit all triplex mowers and make your greens care cultural practices FAST and EASY. Since 1992, True-Surface® has had no planned obsolescence; this policy will also apply to the Greens Care Collection.

**Otterbine aerators and fountains are ideal for virtually any application!**

Reducing algae and foul odors, Otterbine aerators improve your water quality and are backed by a 5-year warranty to insure that they get the job done. Whether it's the pond in your backyard, irrigation pond on a golf course or farm, detention pond in your community - anywhere you are looking to improve your water quality and perhaps create some aesthetic appeal, Grassland has a solution for you!

From small areas to large acreages, **Micro Rain** travelers are designed to put "convenience" back into watering. Grassland can give you assistance in choosing the appropriate model for your application. The MR43 is the ideal machine for achieving single pass coverage on football fields, large riding arenas, and more. With flow ranges from 15 to 50 gallons per minute and a 393 feet hose length, the MR43 can effectively water up to 1.5 acres in a single pull! The ability to add the reliable Honda boost pump kit, can greatly enhance performance in low-pressure situations.

For more information, contact:  
John Eustace 315-374-8445

The ALL New ACCU-Sharp 605 is the newest addition to the "Auto-Index Relief" family of automatic reel grinders for Foley United. For those who desire the "auto-index" relief system, but don't quite have the budget for our tabletop style units, this machine provides all the options you need. Not only will the ACCU-Sharp "spin" and "relief" grind, it will do bedknives as well!

# The College of Saint Rose Golden Knights Choose Pro's Choice Soilmaster Select for their Baseball Infield Conditioner

by John Halloran

The College recently chose to incorporate 12 tons (480 bags) of Pro's Choice Soilmaster Select to improve the drainage and water holding capacity of their new infield completed this past spring.

1  
The infield had settled after construction and keeping moisture on the infield especially with the dry summer that we had in 2010 proved difficult.

2  
480 bags of Pro's Choice infield conditioner were spaced around the field approximately three feet apart.

3  
The bags were then cut away leaving the conditioner on top of the existing infield waiting to be blended into the top 1.5" of infield mix.

4  
Leveling and blending was accomplished using the College's Toro Infield Pro 5040. The Flex Blade, Mid Mount Scarifier, Drop Down Grader Blade, as well rear mounted Nail Drag and Tooth Rake, were all employed to accomplish this task.

5  
In order to get this new mixture firm and playable, numerous rounds of blending, irrigating and rolling will make this infield one of the most ready and playable for spring 2011.

This field was dedicated in spring to longtime coach Bob Bellizzi
